Karol Klodziński

**Equestrian cursus honorum basing on the careers of two prominent officers of the Emperor Marcus Aurelius’**

A French scholar, H. G. Pflaum estimated that since the end of the reign of Vespasian till the times of Commodus eighty-two new procurator offices were created [1]. On the other hand, Géza Alföldy claims that in the second half of the second century the equalization of the meaning and officials’ prestige of equestrians and senators occurred, ultimately in the third century the number of equestrian posts surpassed the number of senatorial ones [2]. As a consequence of that, it seems as if imperial administration - bound people from *ordo equester* - was still developing in the second century. Through holding many civil and military posts members of the second social class were a very important pillar of imperial administration functioning in *Imperium Romanum*.

Only military service allowed for the equestrians to achieve procurator posts and big prefectures. Military *cursus honorum* of *equites* was being created successively [3]. Before Claudius equestrians could hold two military posts: *tribunus militum augusticlavius* and *praefectus alae* [4]. Under Claudius the military service (*militia*) was organized in system of *tres militiae* [5]. *Equites* commanded the auxiliary units (*auxilia*) - firstly the cohort (*praefectus cohortis*), which had 500 (*quingenaria*) infantry soldiers, then the cavalry unit (*praefectus alae*), which had 500 cavalrymen. At the end of this structure equestrians joined the legion to serve as military tribunes (*tribuni augusticlavii*). After Claudius prefecture of *ala* returned on the top of *tres militiae equestres* [6]. Proceeded by the prefecture of *fabrum*, the system of military promotion popularized during the Flavians [7]. Probably under Hadrian *quarta militia* (*praefectus alae milliariae*) was included [8]. Hubert Devijver created the pyramid of *militiae equestres*, which was the rule in the middle of the second century [9].

*Militia I:* *praefectus cohortis quingenariae/tribunus cohortis voluntariorum* – about 300 posts.

*Militia II:* *tribunus militum legionis augusticlavius/tribunus cohortis milliariae* – about 190 posts.

*Militia III:* *praefectus alae quingenariae* – about 90 posts.

*Militia IV:* *praefectus alae milliariae* – about 9 posts.

*I am very grateful to M.S. Jacek Welniak for lingual consultation.*
We can say that only few equestrians could be promoted in the four militiae system. About 3% equestrian commanders, who finished the service of militia prima could have a chance on achieving of militia quarta, because since out of about 300 posts included in militia prima only about nine was available in militia quarta [10]. P. A. Brunt thinks that every post was held by equites for only one year in militiae system [11]. On the other hand, Y. Le Bohec and M. Hassall claim that each of the stages of equestrian military career lasted for three years [12]. However, G. Webster and P. Southern suppose that every post in militiae system was served for three or four years [13].

From the times of Claudius experienced soldiers after holding of primipilat could achieve the posts of tribunes in cohorts of vigiles, praetoriae and urbane [14]. Cursus honorum of prominent tribunes of garrison in Rome was crowned by procurator posts [15]. In consequence of this, it seems, that there existed big convergence between the results of their careers and careers of equestrian officers, who were serving militia [16].

Procurators of the Emperor’ property and family in provinces (procurator patrimonii, rationis privatae), procurators of finances in provinces, governors of provinces, magistrates who fulfilled specialized tasks (e.g. procurator ludi magni) and secretaries in imperial chancellery (ab epistulis, a libellis, a rationibus, a cognitionibus, a studiis, a memoria, a commentariis) were included in procurator posts. All these posts (under Augustus - 25, under Septymiun Severus - 178 equestrian civil posts) were divided according to annual emolument on: sexagenarii – 60.000 sesterces, centenarii – 100.000 sesterces, ducenarii – 200.000 sesterces, trecenarii (from Marcus Aurelius) – 300.000 sesterces [17]. Since the times of Marcus Aurelius equestrians had special titles which depended on their ranks and posts [18]. High, and with time lower imperial procurators had the title vir egregius, prefects - from prefecture classis to prefecture annonae and later high procurators the title vir perfectissimus, but praetorian prefects and prefects vigilum from the third century the title vir eminentissimus [19].

The prefectures vigilum, annonae, Aegypti and praetorio were on the top of equestrian cursus honorum. In the second century former praefecti annonae and to a smaller degree praefecti vigilum often took the prefecture Aegypti [20]. On the other hand, the praetorian prefecture in the Principate was the highest post in equestrian cursus honorum [21]. Between 70-235, for fourteen prefects of Egypt the prefecture of the praetorian guard was the highest level in equestrian cursus honorum. Whereas before the year 70, for four prefects of the praetorian guard the prefecture of Egypt was the highest office [22]. The extensive importance of the praetorian prefects was
supported by the fact that their annual emolument, which in the middle of the second century amounted to one million sesterces, was the highest among the entire imperial administration [23]. Equestrian procurators of higher rank and big prefects formed, according to the term of Tacitus - *equestris nobilitas* [24].

We know the details of the development of equestrian career due to prosopographical researches [25]. The ways of promotion and individual careers of people are present in the inscriptions which are direct sources of the past [26].

The Effectiveness of the group researched is dependent on the credibility and amount of historical material [27]. H. Devijver estimated that between 30 BC - 268 between 2000 and 2100 were only equestrian officers out of 50.000 who probably existed, which gives about 4% [28]. On the other hand, R. Sablayrolles enumerated that from the time of the Principate we have the knowledge of one hundred and one prefects of the praetorian guard (*praefecti praetorio*), one hundred and twenty three prefects of Egypt (*praefecti Aegypti*) and only thirty-eight prefects of the *vigiles* (*praefecti vigilum*) and twenty-three prefects of the food supply (*praefecti annonae*) [29]. Seems as if we knew of three-quarters of the highest civil servants of equestrian rank of the age of the Principate (*praefecti praetorio* 70%, *praefecti Aegypti* 78%) [30].

The political elite of Roman society is superbly represented by sources, so the discussion about two different careers of praetorian prefects is not accidental in this study. *Expressis verbis* we can say, the careers of Marcus Bassaeus Rufus and L. Iulius Vehilius Gallus Iulianus are extraordinarily representative of the second half of the second century [31].

The inscription [32] from Rome, the inscription [33] form ancient Ostia (Latium and Campania - Regio I) and founded in 1957 *Tabula Banasitana* [34] from Africa (Mauretania Tingitana) present *tria nomina* of Marcus Bassaeus Rufus. The parts of name - Bassaeus Rufus are *nomen gentile* and *cognomen*. These parts of name are shown in the inscription from Saepinum in Samnium (Regio IV) [35]. The fragmentary *gentilicium* and full *cognomen* of Rufus have survived in the inscription from Celeia in Noricum [36]. Marcus Bassaeus Rufus came from Italy [37]. *Cognomen* Rufus is numerous among the Roman legionnaires [38]. The career of Bassaeus Rufus is present by the style *cursus inversus* in the inscription from Rome - CIL VI 1599 = CIL VI 31828 = ILS 1326:

\[
\begin{align*}
M(arco) & \text{ Bassaeo } M(arc) f(ilio) \text{ St}(el(atina)] / \text{ Rufo } p(r)aefercto \text{ pr} (aetorio) / \\
[\text{Im}perorum] & M(arc) \text{ Aureli Antonini et} / [L(tuc)i] \text{ Aureli Veri et L(uc)i} \text{ Aureli Commodi Augg} (\text{ustorum}) / \text{ [c]onsularibus ornamentis honorato / [e]t ob victoriam Germanicam et}
\end{align*}
\]

„For Marcus Bassaeus, the son of Marcus, of the tribe Stellatina, Rufus, praetorian prefect of the Emperors Marcus Aurelius and Lucius Verus and Commodus, honored with the consular insignia, for the victorious war with the Germans, and Sarmatians by the Emperors Marcus Aurelius and Commodus, decorated with the gold mural crown, and four times with a the silver-topped spear, similarly honoured by the besieged units, prefect of Egypt, prefect of vigiles, procurator of the central financial administration in imperial chancellery, procurator of the province of Gallia Belgica, procurator of both Germanarum, governing of Noricum, procurator of Asturias and Galicia, tribune of cohort […] of the praetorians, tribune of the tenth urban cohort, tribune of the fifth cohort of vigiles, the centurion of the highest centuria in the first cohort twice, for him by decision of senate, Aurelius and Commodus, a statue clad in armour was erected on the forum of divine Trajan as well as the second statue thanks to citizens founded in the temple of divine Pius and the third statue clad in armour in the temple of Mars Ultor […] (transl. K. Kłodziński)”

From among five praetorian prefects of the Antonines, whose full cursus honorum is known, only Marcius Turbo [39] and Bassaeus Rufus achieved the praetorian prefecture without holding equestrian tres militia [40]. What is interesting, both got promotion to ordo equeuster through the primipilat [41]. H. G. Pflaum claims that except for Rufus only five procurators were the primipili at the beginning of their careers [42]. Then Rufus was tribune of the cohorts of garrison of Rome to finally become primipilus bis [43]. The next level in his career was the post of the procurator of provinces Asturias and Galicia in rank ducenarius [44]. In the second century except for Rufus out of one hundred procurators only seven people were primipilares bis before the holding the post of procurator [45]. Before 161 Bassaeus Rufus was the procurator of Noricum [46], then the procurator of Belgicae and duarum Germaniarum. In turn Rufus went to the imperial palace where he was a rationibus in rank treccenarius [47]. The next level in his career was the prefecture vigilum [48]. Rufus held this post on 10 March 168 [49]. After 10 March 168, by several months Rufus was the prefect of Egypt [50]. Rufus through receiving of ornamenta consularia achieved the rank of former consul [51]. The last degree of his cursus honorum was the praetorian prefecture which held
in 168-177 [52]. Bassaeus Rufus as praefectus praetorio escorted the Emperor during the Marcomanic Wars [53]. On the basis of statistic composition Richard Saller claims that „less than one out of one hundred centurions can achieve the top of equestrian career – the praetorian prefecture (transl. K. K.)” [54]. The abovementioned considerations and the statistic data quoted present prominent person who achieved the top equestrian cursus honorum not thanks to great origin, but mainly excellent military success. In the case of Rufus military contributions are undoubtedly an important factor of his social mobility.

Equally experienced on the military field and administration was another commander of the Emperor Marcus Aurelius – equestrian officer L. Iulius Vehilius Gallus Iulianus, whose career, finished with the praetorian prefecture is quite different than the career of Bassaeus Rufus.

The inscription from Rome, which was found in 1887 presents long name - L. Iulius Vehilius Gratus Iulianus [55]. The inscription from ancient Brixia (present-day Brescia) gives his tria nomina - T. Iulius Iulianus [56]. His nomen gentile and cognomen - Iulius Iulianus is adapted in the inscription from Ostia Antic [57]. The inscription from Palmyra shows the same parts of name in Greek - Ioulios Ioulianos [58]. Recently, CIL VI 41271 (Roma 2000) presents subtly different, but in my opinion, more accurate form of his name - L. Iulius Vehilius Gallus Iulianus. Imperial gentilicium of Iulianus is the most numerous among equestrian officers who has imperial nomen gentile [59]. However, cognomen Iulianus was very popular among Roman legionnaires [60]. Probably Iulianus was born about 127 A.D [61]. So we can say that he took the praetorian prefecture when he was 62 years old. Scholars are not unanimous on the matter of Iulianus’ origin [62]. The inscription which gives his full name, presents very rich equestrian cursus honorum of Iulianus too; and states the brilliant career – CIL VI 31856 = ILS 1327:

L. Iulio Veh[il]io Gr[ato] Iuliano, pra[ef(ecto)] pr(aetorio), praef(ecto) ann(onaee), a rationib(us), praef(ecto) c[lasis praet(oriae)] Misenat(is), pra[ef(ecto)] classis praet(oriae) Raven[nat(is), proc(uratori)] Aug(usti) et praep(osito) vexill[ationibus] tempore belli [Britannici, pr]oc(uratori) Aug(usti) provinc[iae] Lusit[aniae] et Vett[oniae], proc(uratori) A[jug(usti) et praeposito(] vexillationis per[...] proc(uratori) Aug(usti) et praef(ecto) classis Po[ntica]e, proc(uratori) Aug(ustorum) e]t pra[ep(osito)] vexillationis per Achaiaem et Macedoniam et in Hispanias, adversus Castabocas et Mauros rebelles, praeposito vexillationibus tempore belli Germanici et Sarmat(ici), praef(ecto) alae Tampianae, praef(ecto) alae Herculanae, trib(uno) cohort(is) primae Ulpiae Pannoniorum, praef(ecto) cohort(is) tertiae Augustae Thracum, donis militaribus donato ab Imper[atoribus Antonio et] Vero ab victori[am] [belli Parthi]ci, item ab Antonio et [Commodo ob
“For Lucius Iulius Vehilius Gratus Iulianus, the prefect of the praetorian guard, prefect of the corn supply, secretary of the central financial administration in imperial chancellery, prefect of the praetorian fleet from Misenum, prefect of the praetorian fleet from Ravenna, procurator Augusta and commander of the units formed from legion during the war in Britain, procurator of the province of Lusitania and Vettonia, procurator Augusta and commander of the unit formed from legion by […], prefect of the fleet from Pontus, procurator Augusta and commander of the unit derived from legion in Greece, Macedonia and in Spain, fighting against the Costoboci and the rebellion of the Mauri, commander of the units formed from legion during the war with the Germans and Sarmatians, prefect of the cavalry unit Tampianae, prefect of the cavalry unit Herculanae, tribune of the first cohort Ulpiae Pannoniorum, prefect of the third cohort Augusta Thracum, donee military financial reward by Emperors Marcus Aurelius and Lucius Verus thanks to the victorious Parthian war, similarly by Marcus Aurelius and Commodus thanks to victory in the war against Germans and Sarmatians […] (transl. K. Kłodziński)”
The inscription (CIL VI 31856 = ILS 1327) from Rome, which presents the career of Iulianus
(source: http://cil.bbaw.de/test06/bilder/datenbank/PH0003170.jpg)

The inscription presents *cursus* of Iulianus as *cursus inversus*, similarly to the career of Bassaeus Rufus. Unlike Rufus, L. Iulius Vehilius Gratus Iulianus held four *militiae - praefectus cohortis tertiae Augustae Thracum (quingenariae)* [63], *tribunus cohortis primae Ulpiae Pannoniorum (milliariae)* [64], *praefectus alae Herculanae (quingenariae)* [65], *praefectus alae Tampianae (milliariae)* [66].

Between 157 and 160 Iulianus was a prefect of the third cohort *Augustae Thracum* in Syria [67]. Between 160 and 163 Iulianus held the tribunate of the first cohort *Ulpiae Pannoniorum* in Pannonia Superior [68]. While serving this post, T. Iulius Iulianus dedicated the inscription for *praesidi optimo* and M. Nonius Macrinus (*cos. suff.* in 154), the legate of *Augusta* in rank the prætorian province of Pannonia Superior [69]. In the inscription *praenomen* of Iulianus is Titus, not Lucius, which the later inscription (CIL VI 31856 = ILS 1327) presents. In 167 Iulianus as a prefect
alae Herculanae got dona militaria in the Parthian war [70]. Later in 167 or 168 Iulianus was a prefect alae I Pannoniorum Tampianae in Noricum [71]. Between 166 and 180 Iulianus became commander of vexillationes four times [72]. Iulianus as procurator Augusti (ducenarius) had extraordinary command powers [73]. Probably Iulianus defended the north limes against the Germans and Sarmatians [74]. L. Iulius Vehilius Gallus Iulianus also fought against the Costoboci who in 170 did the invasion on the Balkans [75]. About 171 the great officer was sent to Spain to fight with the Mauri [76], then in 173 Iulianus became procurator Augusti and prefect provincional classis Ponticae (centenarius) [77]. Misenum and Ravenna [78]. In 177 he became procurator Augusti provinciae Lusitaniae and Vettoniae (ducenarius) [79]. Maybe, thanks to Iulianus the rebellions in Lusitania were quelled (HA, Marcus Aurelius 22, 11).

Then Iulianus was proc(urator) Aug(usti) et praep(ositus) vexil[la]tion(ibus) tempore belli ….. [80]. The lacuna is restored twofold in this place. Borghesi 1897, 72 = CIL VI 31856 = ILS 1327 give Britannici. So, according to V. Chapot and B. Borghesi, Iulianus commanded one vexillatio during the war in Britain in years 183-184 [81]. Maybe Ulpius Marcellus [82] was favoured by the military units of Iulianus in Britain [83]. However, CIL VI 41271 (Roma 2000) presents Germanici II as fulfilling of the lacuna. M. Żyromski thinks that between 178 and 180 Iulianus was procurator Augusti et preapositus vexillationis tempore belli Germanici II donis militaribus donatus ab Imp. Antonino et Commodo ob victoriam belli Germanici et Sarmatici [84]. This sentence is closer to the truth because it is in accordance with the chronological sequence of the posts held by this equestrian. Iulianus could not have fought in Britain in years 183-184, governing at the same time the prefecture of the fleet from Misenum and Ravenna. These posts were the successive posts of the career of Iulianus.

The serving the praetorian prefecture by Iulius Iulianus is confirmed by the fragment of the another inscription [85]. The inscription is dated back to 15 July 190 ((ded(icata) I)d(us) Iul(ias) Commo(do) Aug(usti) VI / [[[M(arco) Pe]tronio Septimiano]] co(n)s(ulibus)). Thanks to this inscription we know that on 15 July 190 Iulianus was a sole praetorian prefect. Iulianus became sentenced to death by the Emperor Commodus (Cass. Dio, 72, 14, 1; HA, Commodus 7, 4) and condemned by damnatio memoriae (CIL XIV 4378). According to Cassius Dio, Iulianus was one of the prominent people who died by order of Commodus. Before the death big friendship connected Commodus and Iulianus (Cass. Dio, 72, 14, 1). Probably the date post quem of the murder is 15 July 190.

Yann Le Bohec accurately stated that the prefect of the praetorian guard held simultaneously the function of the first minister and the minister of war [86]. The comparison of cursus honorum of two officers shows two different careers which are concluded with the
achievement of the praetorian prefecture. In the end, we can ask a question, if it was only their military and administrative offices that influenced the progress their careers? These features had big influence, but nevertheless, it was the Emperor’s will that served as a mainspring of one’s career and determined who should be granted an office [87].

   49. CIL XIV 4500. L. Vanuleius Apronianus II and L. Sergius Paullus II were the consuls in 168, Klein 1881, 77. Cf. Passerini 1939, 303; Brunt 1975, 146.
   51. The thesis of Hirschfeld (Hirschfeld 1905, 450) is correct. The German scholar thinks that the lending of ornamenta consularia by Emperors to praefecti praetorio was the rule in the second century. In this century the Emperors gave the ornamenta consularia to four praetorian prefects, but in the first century only to three - nota
bene another two achieved the *ornamenta praetoria*, Marquardt, Mommsen 1876, 447; Ensslin 1954, 2399. According to Michel Absil (Absil 1997, 47), even ten praetorian prefects got the *ornamenta consularia* in the second century.
